

DispatchOne Messaging Alerts | Last Update: Aug 28, 2024

Problem Alignment:

DispatchOne currently sends communication for predefined events with Delhivery sender ID and brand name. An enhanced messaging service will help tenants increase their brand affinity and customer experience with clients and will give the flexibility to trigger communication as per business requirements.

Scope of Solution:

Phase 1:

1. DispatchOne will have a predefined list of variables and links.
2. DispatchOne will have a predefined list of 7 order events for sending alert messages.
3. For SMS message alerts:
 - A. Customization of SMS Header/Sender ID and brand name.
 - B. Customisation of SMS messages with variables and links.
 - C. Ability to send SMS messages to both consignor and consignee.
4. For email message alerts:
 - A. Customization of sender email address.
 - B. Customisation of email subject lines with variables.
 - C. Customisation of email messages with brand logo.
5. For tracking page:
 - A. Customisation of the tracking page with brand logo.

Phase 2:

1. For SMS message alerts:
 - A. UI option to create SMS messages associated with an order event. This SMS message can include any of the variables and links available in the predefined list.
 - B. Preview the SMS message alerts setup for an order event.
2. For email message alerts:
 - A. Setup of default email messages for an order event.

- B. UI option to create email messages associated with an order event. This message can include any of the variables and links available in the predefined list.
 - C. Preview the email message alerts setup for an event with variables.
 - D. Support sending attachments (PDF, image) for an order event.
3. For WhatsApp message alerts:
- A. Customization of Sender ID and WhatsApp business profile.
 - B. UI option to create WhatsApp messages associated with an order event. This message can include any of the variables and links available in the predefined list.
 - C. Preview the WhatsApp message alerts setup for an order event.
 - D. Support sending attachments (PDF, image) for an order event.
4. For tracking page:
- A. Ability to collect feedback and comment once an order is marked as delivered.

System Design:

1. DispatchOne messaging integration with OS1 messaging service.
2. For SMS message alerts:
 - A. A tenant in India can register SMS Header/Sender ID and brand name with their principal entity ID (PEID) at any DLT platform and share these values with DispatchOne. DispatchOne stores these values against a tenant.
 - B. A tenant in India will have to register pre-defined DispatchOne SMS templates with any DLT platform and share these template IDs with DispatchOne. DispatchOne will store these template IDs against its respective SMS templates.
 - C. For tenants in the rest of the world (except Singapore), A and B flows are not required.
3. For email messages alerts:
 - A. A tenant can use an email address with their domain name as the sender email address. This sender email address is verified and is set up for a tenant through the backend.
 - B. Brand logo of a tenant are set up through the backend.

4. For tracking page:

- A. Brand logo, and brand name of a tenant are set up through the backend.

Solution For Phase 1:

1. For a tenant, the current SMS and email templates set up in DispatchOne are used for messaging.
2. When a tenant requests for custom messages, then the SMS and email templates of #4 and #5 are set up in the backend.
3. The predefined list of variables and links that can be included in the messaging templates is below.

Variable ID	Variables	Note
V0	org_name	up to 30 characters
V1	order_ID	truncated to 8 characters
V2	order_description	truncated to 8 characters
V3	consignee_name	first name
V4	consignor_name	first name
V5	shipment_count	
V6	rider_name	first name
L1	tracking_link	https://{brand_name}.getos1.com/tracking/?orderId={order_ID}

4. The list of customised SMS templates for both forward and reverse order events are listed below. These SMS templates include some of the predefined list of variables and links.

Order Flow	Event	Template
Forward	order-created	Your order {order_ID} has been placed successfully. -{brand_name}
Forward	rider-assigned	Arriving Soon: Your order {order_ID} will be picked up soon.

		Track here: {tracking_link} - {brand_name}
Forward	order-cancelled	Cancelled: Your order {order_ID} has been cancelled. Track here: {tracking_link} - {brand_name}
Forward	order-picked-up	Arriving Soon: Your order {order_ID} has been picked up and is on the way. Track here: {tracking_link} - {brand_name}
Forward	order-delivered	Delivered: Your order {order_ID} has been delivered successfully. Track here: {tracking_link} - {brand_name}
Forward	Order-verification - success-otp	Your OTP is {OTP} to proceed with the {order_ID} completion process. - {brand_name}
Forward	Order-verification - failure-otp	Your OTP is {OTP} to proceed with the {order_ID} cancellation. - {brand_name}
Forward	Order-verification - reschedule-otp	Your OTP is {OTP} to proceed with rescheduling order {order_ID}. - {brand_name}
Forward	order-undelivered	Undelivered: We were unable to deliver your order {order_ID}. Track here: {tracking_link} - {brand_name}

Forward	order-delivery-failed	Delivery Failed: We were unable to deliver your order {order_ID} as delivery attempts failed. Track here: {tracking_link} -{brand_name}
Reverse	order-created	Your order {order_ID} has been placed successfully. -{brand_name}
Reverse	rider-assigned	Arriving Soon: Your order {order_ID} will be picked up soon. Track here: {tracking_link} -{brand_name}
Reverse	order-cancelled	Cancelled: Your order {order_ID} has been cancelled. Track here: {tracking_link} -{brand_name}
Reverse	order-picked-up	Picked Up: Your order {order_ID} has been picked up successfully. Track here: {tracking_link} -{brand_name}
Reverse	order-verification-otp	Your OTP is {OTP} to proceed with the {order_ID} completion process. -{brand_name}
Reverse	order-delivered	Delivered: Your order {order_ID} has been received successfully. Track here: {tracking_link} -{brand_name}
Reverse	order-undelivered	Undelivered: We were unable to receive your order {order_ID}. Track here: {tracking_link} -{brand_name}

Reverse		Pickup Failed: We were unable to pickup your order {order_ID} as pickup attempts failed.
	order-pickup-failed	Track here: {tracking_link} - {brand_name}

5. The list of customised email subject lines for forward and reverse order events are listed below. These email subject lines include some of the predefined list of variables and links.

Order Flow	Event	Email Subject
Forward	order-created	Your order {order_ID} has been placed successfully.
Forward	rider-assigned	Arriving today: Your order {order_ID} will be picked up soon.
Forward	order-picked-up	Arriving today: Your order {order_ID} has been picked up and is on the way.
Forward	order-delivered	Delivered: Your order {order_ID} has been delivered successfully.
Forward	order-undelivered	Undelivered: We were unable to deliver your order {order_ID}.
Forward	order-cancelled	Cancelled: Your order {order_ID} has been cancelled.
Forward	order-delivery-failed	Delivery Failed: We were unable to deliver your order {order_ID} as delivery attempts failed.
Reverse	order-created	Your order {order_ID} has been placed successfully.
Reverse	rider-assigned	Arriving soon: Your order {order_ID} will be picked up soon.
Reverse	order-picked-up	Arriving soon: Your order {order_ID} has been picked up successfully.
Reverse	order-delivered	Delivered: Your order {order_ID} has been received successfully.
Reverse	order-undelivered	Undelivered: We were unable to receive your order

		{order_ID}.
Reverse	order-cancelled	Cancelled: Your order {order_ID} has been cancelled.
Reverse	order-pickup-failed	Pickup Failed: We were unable to pickup your order {order_ID} as pickup attempts failed.

6. When a new SMS message template is created for a tenant in India, OS1 will have to capture template ID, principal entity ID along with SMS Header/sender ID and store this new SMS message against its order event.
7. When a new SMS message template is created for a tenant outside of India, OS1 will have to store this new SMS message against its order event.
8. When a new email message template is created for a tenant, then OS1 will have to store this new email message against its order event.
9. The list of customised WhatsApp templates for both forward and reverse order events are listed below. These templates include some of the predefined list of variables and links.

Forward	order_ success_code	Your code is {OTP} to proceed with the order {order_ID} completion. -{brand_name}
Forward	order_cancel_code	Your code is {OTP} to proceed with the order {order_ID} cancellation. -{brand_name}
Forward	order_reschedule_code	Your code is {OTP} to proceed with rescheduling order {order_ID}. -{brand_name}

Bira Requirements:

1. For order delivery events in forward flow, SMS will include the number of shipments (kegs count) and the consignee's name (Restaurant/Brewery name). - Supported
2. For order delivery events in forward flow, SMS will be sent to the consignor (Bira) and the consignee. - Supported
3. For order pick up events in reverse flow, SMS will include the number of shipments (kegs count) and the consignee's name (Restaurant/Brewery name). - Custom PSI layer for blind pickup
4. For order pick up events in reverse flow, SMS will be sent to the consignor (Bira) along with the consignee. - Supported
